Portfolio: lynn61liu.github.io

Personal Summary

I have a strong interest in junior Front-end developer. Through my bachelor studies in China, I've gained a solid understanding of computer science. Discovering my passion and interest, I changed my career path after relocating to New Zealand, I have dedicated a lot of time to apply web development concepts to scenarios and applications when studying at Yoobee. I took many courses beyond the content taught in my formal education, and always had a project in the works. I am looking for an opportunity to apply my skills, knowledge, and passion for web design.

Work Experience

Hon Hai Precision Industry Co. Ltd (Foxconn)   WUHAN, CHINA
Software Support Specialist   2016 - 2018

- Troubleshoot and resolve B2B integration related issues with customer and third-party e-procurement applications.
- Communicate the requirements to development teams.
- Create test cases and execute customer testing on integrations system.
- Create business, technical, and data mapping requirements documents.

FiberHome Technologies   WUHAN, CHINA
Software Developer Internship   AUG 2015

- FiberHome Certified Software Engineer Program

Summary of Qualifications

- Experienced with JavaScript ES6
- Experienced with React and MERN stack.
- Experienced with WordPress theme development.
- Responsive web development experience for desktop and multi device.
- Experienced with Front-end build tools like SASS.
- Interaction design skills such as wireframing, user flows, customer journey mapping
- Experienced with Adobe XD
- Familiarity with Agile concepts, and experience practicing SCRUM.
- Solid organizational skills.

Education

Diploma in Web and UX Design - *Yoobee College of Creative Innovation (New Zealand)*
Bachelor of Network Engineering - *Wuhan Institute of Technology of China (China)*

Hi there !

I believe I'm very experienced in front-end development for a student. I've worked with HTML, CSS, and JavaScript for over 12 months and continue to study the "Become a React Developer" learning path at LinkedIn Learning Courses.

Several years ago, I got a bachelor's degree in the field of information technology from a Chinese university with a solid foundation in computer science and 2 years of software support work, involved in developing code on the webMethods Integration server
and debugging as well as testing.

But web design and development is a huge passion of mine, Of course, front-end development technologies emerge in an endless stream and newcomers nowadays have a much steeper hill to climb.

The biggest personal challenge is limited time and energy. I am a single mom and a full-time student who learn UX and web design at Yoobee College of Creative Innovation
when my baby was 18 months. I had to balance caregiver responsibilities and learning tasks.

I often struggle with not having enough chunks of time sitting in front of the computer to practice code during the Lockdown. But overcome challenges by focusing on efficiency use of fragmented time. Steal short times for learning theory, researching the concept and reading code snippets from the daily job of care the baby. Then practice code with a sleeping baby in my arms. Of course, now she is a happy girl in kindergarten and I have enough experience to squeeze time doing my work while accompanying her.

I'm passionate about design and UX. I like building whimsical, delightful experiences, and I believe it is a fast-paced developing area that combines problem-solving and aesthetic principles even psychology. I do all the design work on my personal projects, and it's a ton of fun.

Looking forward to hearing from you
